

An invitation to personal exploration with M.I.T.'s Technology Review

Come along with a distinguished company of scientists, journalists and members of the M.I.T. community to explore the advancing frontiers of technology and industry and their implications for social, cultural and business change. Your transport is TECHNOLOGY REVIEW.

The journey begins when you mail the card enclosed above.

Edited at M.I.T. for 70 years, the REVIEW is a broadly significant contemporary journal. Its central concern is with the present. Its editorial commitment is to new developments in science, engineering and management and their impact on people in all human affairs. The REVIEW is also one of the handsomest journals of science published anywhere. Issues are 9" x 11-1/2", run about 80 pages and are profusely illustrated.

Nine times a year the REVIEW brings you perceptive, original articles that help you relate advancements in one field with developments in another. You gain a better perspective of social, business and cultural changes as they take place around you.

For example, recent issues spanned virtually the entire spectrum of scientific speculation, research and application through such assessments and inquiries as:

HOW TO SUCCEED IN A NEW TECHNOLOGY ENTERPRISE -- Chances for success are better than 8 in 10 if you are the ideal entrepreneur, if your technology is good and if you know how to run a tight ship.

MAKING COMPUTERIZED KNOWLEDGE SAFE FOR PEOPLE -- Examines the 5 requirements which must be fulfilled if a computer utility is to serve people without endangering their rights.

CAN WE MAKE THE FUTURE WORTH SURVIVING IN? -- For centuries our goals have been affixed to growth. Can we now envision a society whose purpose is stability?

(over, please)

MUST WE BREATHE SULFUR OXIDES? -- The sulfur pollutants are among the most dangerous in air pollution today; and their elimination presents some of the most serious problems.

INNOVATION IN HOUSING: PIPE DREAMS OR PRACTICAL REALITY? -- The U.S. is building half the housing it needs. New technology and new attitudes hold the key to make up the deficit.

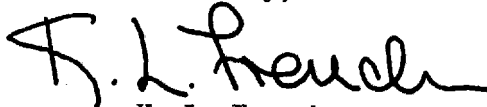

Architecture and biology -- engineering and executive skills -- ecology and economics -- TECHNOLOGY REVIEW helps you tap new resources as it brings you contributions from every science and relates them to every-day living and the managerial revolution.

AND PLEASE NOTE: While serious, the REVIEW is never dry. It provides entertaining, even relaxed reading. Such regular departments as GOVERNMENT REVIEW, SCIENCE REVIEW, EUROPEAN REVIEW and PUZZLE REVIEW enrich an always interesting editorial mix. The Correspondence Section places you at the center of an interchange of opinion and comment from Management, Science and Industry readers around the world. You will enjoy yourself on these journeys with the TECHNOLOGY REVIEW. That's a promise.

It's the promise we make you with this offer of an Introductory Trial Subscription. Your satisfaction is guaranteed in this way: If at any time the REVIEW fails to live up to your expectations, you may cancel and receive refund for all issues not yet mailed.

A fascinating experience awaits you after you mail the postpaid reply card enclosed below. Send no money now, unless you prefer. We'll invoice later.

Sincerely,

K. L. French
for the Review
